# ROADMAP

1. An overview
2. Fuzzy Logic
3. Neural Networks

## **An overview**

---

# TRENDS

“Numbers represent search interest relative to the highest point on the chart for the given region and time.

- A value of 100 is the peak popularity for the term;
- A value of 50 means that the term is half as popular;
- A score of 0 means there was not enough data for this term.”

# GLOBAL DATA TRAFFIC

Update on the internet in real time is available [here](#).

## TOP USES

## LITERATURE REVIEW (1/3)

[Mit97]

“The field of machine learning is concerned with the question of how to construct computer programs that automatically improve with experience.”

Mitchell, T. (1997) *Machine Learning*. **McGraw-Hill International Editions. McGraw-Hill.**

---

## LITERATURE REVIEW (2/3)

[Woj12]

“Machine learning (ML) is a scientific discipline that concerns developing learning capabilities in computer systems. Machine learning is one of central areas of Artificial Intelligence (AI). It is an interdisciplinary area that combines results from statistics, logic, robotics, computer science, computational intelligence, pattern recognition, data mining, cognitive science, and more.”

Wojtusiak, J. (2012) Machine learning. In *Encyclopedia of the Sciences of Learning*, pages 2082–2083. Springer US.

## LITERATURE REVIEW (3/3)

[ENM15]

“Machine learning is an evolving branch of computational algorithms that are designed to emulate human intelligence by learning from the surrounding environment. They are considered the working horse in the new era of the so-called big data. Techniques based on machine learning have been applied successfully in diverse fields ranging from pattern recognition, computer vision, spacecraft engineering, finance, entertainment, and computational biology to biomedical and medical applications. [...] The ability of machine learning algorithms to learn from current context and generalize into unseen tasks would allow improvements in both the safety and efficacy of radiotherapy practice leading to better outcomes.”

El Naqa, I. and Murphy, M. J. (2015) *What Is Machine Learning?*, pages 3–11. **Springer International Publishing.**

## Debrief

Machine Learning is a branch of computer science which focuses on automation of intelligent behavior.

SOME DEFINITIONS CAN BE CATEGORIZED INTO FOUR FRAMES.

## Debrief

Machine Learning is a branch of computer science which focuses on automation of intelligent behavior.

**SOME DEFINITIONS CAN BE CATEGORIZED INTO FOUR FRAMES.**

## SYSTEMS THAT THINK LIKE HUMANS

[Bel78]

“[The automation of] activities that we associate with human thinking, activities such as decision-making, problem-solving, learning...”

Bellman, R. E. *An Introduction to Artificial Intelligence: Can Computers Think?* **Boyd & Fraser Publishing Company.**

---

[Hau89]

“The exciting new effort to make computers think[...] *machines with minds*, in the full and literal sense”

Haugeland, J. (1989). *Artificial Intelligence: The Very Idea*. **A Bradford book. MIT Press.**

---

## SYSTEMS THAT THINK RATIONALLY

[CMM85]

“The study of mental faculties through the use of computational models.”

Charniak, E., McDermott, D., and McDermott, D. V. (1985). *Introduction to Artificial Intelligence*. Addison-Wesley series in computer science and information processing. Addison-Wesley.

---

[Win92]

“The study of the computations that make it possible to perceive, reason, and act.”

Winston, P. H. (1992). *Artificial Intelligence*. A-W Series in Computer Science. Addison-Wesley Publishing Company.

---

## SYSTEMS THAT ACT LIKE HUMANS

[Kur92]

“The art of creating machines that perform functions that require intelligence when performed by people.”

Kurzweil, R. (1992). *The Age of Intelligent Machines*. **Viking**.

---

[RK91]

“The study of how to make computers do things at which, at the moment, people are better.”

Rich, E. and Knight, K. (1991). *Artificial Intelligence*. **Artificial Intelligence Series. McGraw-Hill**.

---

## SYSTEMS THAT ACT RATIONALLY

[Sch90]

“A field of study that seeks to explain and emulate intelligent behavior in terms of computational processes.”

Schalkoff, R. J. (1990). *Artificial Intelligence: An Engineering Approach*. **McGraw-Hill Computer science series**. McGraw-Hill.

---

[LS93]

“The branch of computer science that is concerned with the automation of intelligent behavior.”

Luger, G. F. and Stubblefield, W. A. *Artificial Intelligence: Structures and Strategies for Complex Problem Solving*. **Artificial intelligence**. Benjamin/Cummings Publishing Company.

---

## THOUGHT-PROVOKING QUESTIONS

### How to achieve intelligence on a computer system

#### What do we mean by “Intelligence”?

- ➡ Single faculty or gathering of abilities
- ➡ Learned or existing
- ➡ What happens when we learn
- ➡ Are creativity and intuition measurable
- ➡ Does observable behavior infer to intelligence
- ➡ How knowledge is routed in the human brain

## THOUGHT-PROVOKING QUESTIONS

### How to achieve intelligence on a computer system

#### What do we mean by “Intelligence”?

- ➡ Single faculty or gathering of abilities
- ➡ Learned or existing
- ➡ What happens when we learn
- ➡ Are creativity and intuition measurable
- ➡ Does observable behavior infer to intelligence
- ➡ How knowledge is routed in the human brain

# TURING TEST

## Alan Turing (1950)

The ability to achieve human level performance in all cognitive tasks, sufficient to fool an interrogator.

---

- ✓ Natural Language Processing (NLP) (*Communicate in human language*)
  - ✓ Knowledge Representation (*Store information*)
  - ✓ Automated Reasoning (*Answer questions & draw conclusions*)
  - ✓ Machine Learning (ML) (*Adapt to new circumstances, detect & extrapolate patterns*)
-

# FORMS OF AI

- ☆ Expert Systems (*Based on knowledge or rule settings*)
- ☆ Fuzzy Systems (*Based on fuzzy set theory*)
- ☆ Artificial Neural Networks
- ☆ Genetic Algorithms
- ☆ Belief Networks
- ☆ Hybrid Systems (*Combine two or more approaches*)

## PROGRAMMING LANGUAGE

[julia-lang.org/](http://julia-lang.org/)[illegible]

## DEVELOPMENT ENVIRONMENTS

**Pluto.jl**

▲ \$ docker compose up

▼ \$ docker compose down

# JULIA IN A NUTSHELL

- ▲ Fast
- ▲ Dynamic
- ▲ Reproducible
- ▲ Composable
- ▲ General
- ▲ Open Source

# JULIA MICRO-BENCHMARKS (1/2)

<https://julialang.org/benchmarks>

## JULIA MICRO-BENCHMARKS (2/2)

### Geometric Means of Micro-Benchmarks by Language

1	C	1.0
2	Julia	1.17006
3	LuaJIT	1.02931
4	Rust	1.0999
5	Go	1.49917
6	Fortran	1.67022
7	Java	3.46773
8	JavaScript	4.79602
9	Matlab	9.57235
10	Mathematica	14.6387
11	Python	16.9262
12	R	48.5796
13	Octave	338.704

# SOURCE CONTROL MANAGEMENT (SCM)

The screenshot displays the GitHub repository page for `a-mhamdi/jlml`. The repository is public and has 1 branch and 0 tags. The commit history shows a series of updates to the repository, including adding workflows, toml files, .gitignore, Dockerfile, LICENSE, README.md, docker-compose.yml, and sync \*.toml files.

**Repository Structure:**

File/Folder	Description	Commit Date
github/workflows	troubleshoot docker on jetson nano	3 days ago
toml	sync *.toml files	8 days ago
.gitignore	add .gitignore file	12 days ago
Dockerfile	Update Dockerfile	3 days ago
LICENSE	Initial commit	12 days ago
README.md	fix some issues	8 days ago
docker-compose.yml	add support to arm architecture	3 days ago
sync *.toml	sync *.toml files	8 days ago

**README.md:**

## JLML

A convenient way to run machine learning codes on multiple platforms via Docker.

The repository contains the Dockerfile I use to create an image where you are able to run codes of Machine Learning using `Julia`.

The latest image is built upon every push to this repo. Every update is available at `dockerhub` via `abmhamdi/jml`.

**Repository Statistics:**

- 1 commit
- 0 stars
- 0 forks
- 0 releases
- 0 packages
- 0 languages

<https://github.com/a-mhamdi/jlml>

# CONTINUOUS INTEGRATION (CI)

The screenshot shows the Docker Hub page for the repository `abmhamdi/jlml`. The page includes a search bar, navigation links (Explore, Repositories, Organizations, Help), and a user profile for `abmhamdi`. The repository details show it was updated 3 days ago and is a Julia environment for ML labs. The 'Overview' tab is selected, displaying the 'JLML' title and a description: 'A convenient way to run machine learning codes on multiple platforms via Docker.' Below the description are tags for 'JLML CI', 'passenv', 'docker stars', 'docker pulls', 'version', 'latest', 'docker build', and 'manual'. A note indicates 'docker build automated builds not set up'. The 'Tags' section is also visible. On the right, the 'Manage Repository' button and 'Pulls 8' are shown. A 'Docker Pull Command' box displays the command `docker pull abmhamdi/jlml`.

<https://hub.docker.com/r/abmhamdi/jlml>

## Fuzzy Logic

---

## WHAT IS FUZZY LOGIC?

“There are many misconceptions about fuzzy logic. To begin with, fuzzy logic is not fuzzy. Basically, fuzzy logic is a precise logic of imprecision. [...] fuzzy logic is designed to deal with imperfect information. Imperfect information is information which in one or more aspects is imprecise, uncertain, incomplete, unreliable, vague or partially true. In the real world, such information is the norm rather than exception.”

---

**Lotfi Zadeh**, WCECS 2014

## WHAT DOES FUZZY LOGIC HAVE TO OFFER?

Fuzzy Logic aims at formalizing/mechanizing two noticeable human capabilities:

1. communicating, reasoning and rational decision making  
*(in presence of imprecision, uncertainty & partiality of truth)*
2. performing a wide variety of tasks  
*(w/o measurements or computations)*

## FUZZY LOGIC AS AN EXTENSION OF THE BOOLEAN LOGIC

### Boolean Logic

### Fuzzy Logic

## EXAMPLE OF A FUZZY CONTROL SYSTEM

Continuous  $\rightarrow$  Quantized  $\rightarrow$  Granulated

## ARCHITECTURE

**Rule Base** is provided by experts. It contains the set of rules to govern the decision making.

**Fuzzification** converts crisp numbers to fuzzy sets.

**Inference Engine** decides which rules to be fired matching degree of the current fuzzy inputs.

**Defuzzification** converts the fuzzy sets delivered by the inference engine into some crisp value

## Tipping Problem

What should be the TIP at a restaurant, given the quality of FOOD and of SERVICE. These latter are represented by some scores ranging from 0 (*poor*) to 10 (*excellent*).

### Rules Base

1. FOOD is rancid || SERVICE is poor  $\implies$  TIP is cheap;
2. SERVICE is good  $\implies$  TIP is average;
3. FOOD is delicious || SERVICE is excellent  $\implies$  TIP is generous.

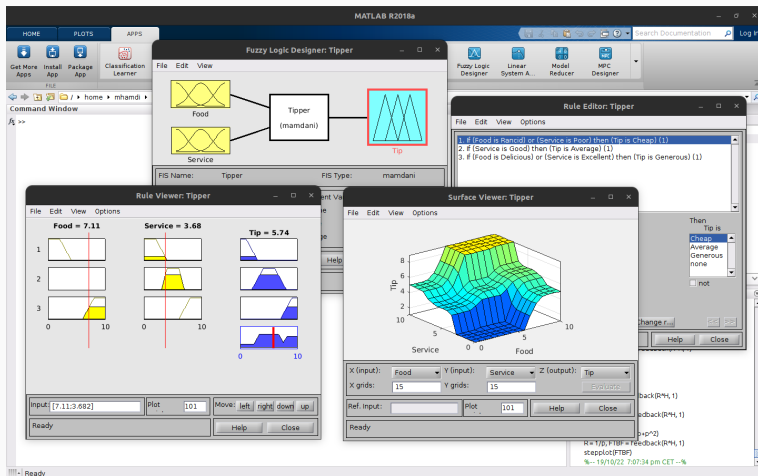

## Tipping Problem

What should be the TIP at a restaurant, given the quality of FOOD and of SERVICE. These latter are represented by some scores ranging from 0 (*poor*) to 10 (*excellent*).

### Rules Base

1. FOOD is rancid || SERVICE is poor  $\implies$  TIP is cheap;
2. SERVICE is good  $\implies$  TIP is average;
3. FOOD is delicious || SERVICE is excellent  $\implies$  TIP is generous.

# USING FUZZY LOGIC TOOLBOX

The code is available at

<https://github.com/a-mhamdi/isetbz/> → Machine Learning → Codes → Matlab → Tipper.fis

# USING FUZZY.JL PACKAGE

The code is available

at <https://github.com/a-mhamdi/isetbz/> → Machine Learning → Codes → Julia → tipper.jl
